

Identity Engines Replacement Program

A recent and well thought out decision to implement secure campus wide mobility may not have gone as planned.

Unfortunately, Identity Engines (idEngines) has recently been forced to exit the Identity Networking market leaving a number of customers with potentially unsupported products.

Avenda Systems is providing all existing idEngines customers an opportunity to replace any of their idEngines products with solutions from Avenda for Guest Access, authentication of students and administrative staff, secure 802.1X wireless access and real-time laptop virus integrity checks.

Maintain your organization's leadership image while improving communications:

- Easy-to-configure mobile access security
- Specific access privileges for employees, guests, contractors, and students in the education market
- Widest support of corporate and user owned laptops, smartphones, and desktops

Avenda is offering **up to \$25,000 credit** for the return of any pair of idEngine's Ignition products, when applied towards the purchase of a comparable Avenda solution. A brief 15 minutes of your time is all that we need to put your previous security decisions back on track.
